SOC143 – Password Stealer Detected (Event ID 90) – Incident Report

Oct 19, 2026 · @Jack

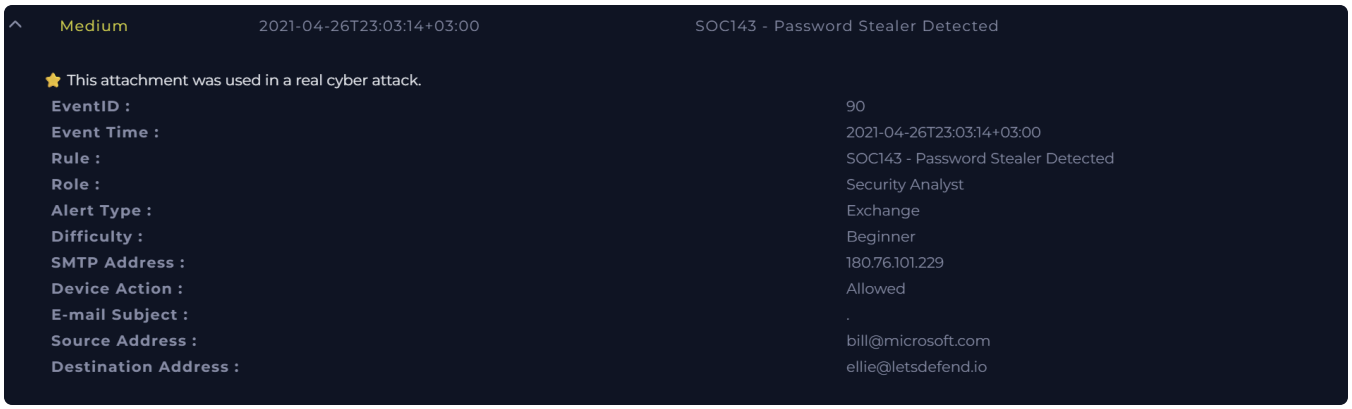

The email was malicious, but there is no evidence the attachment was opened. The alert is a true positive with no confirmed impact.

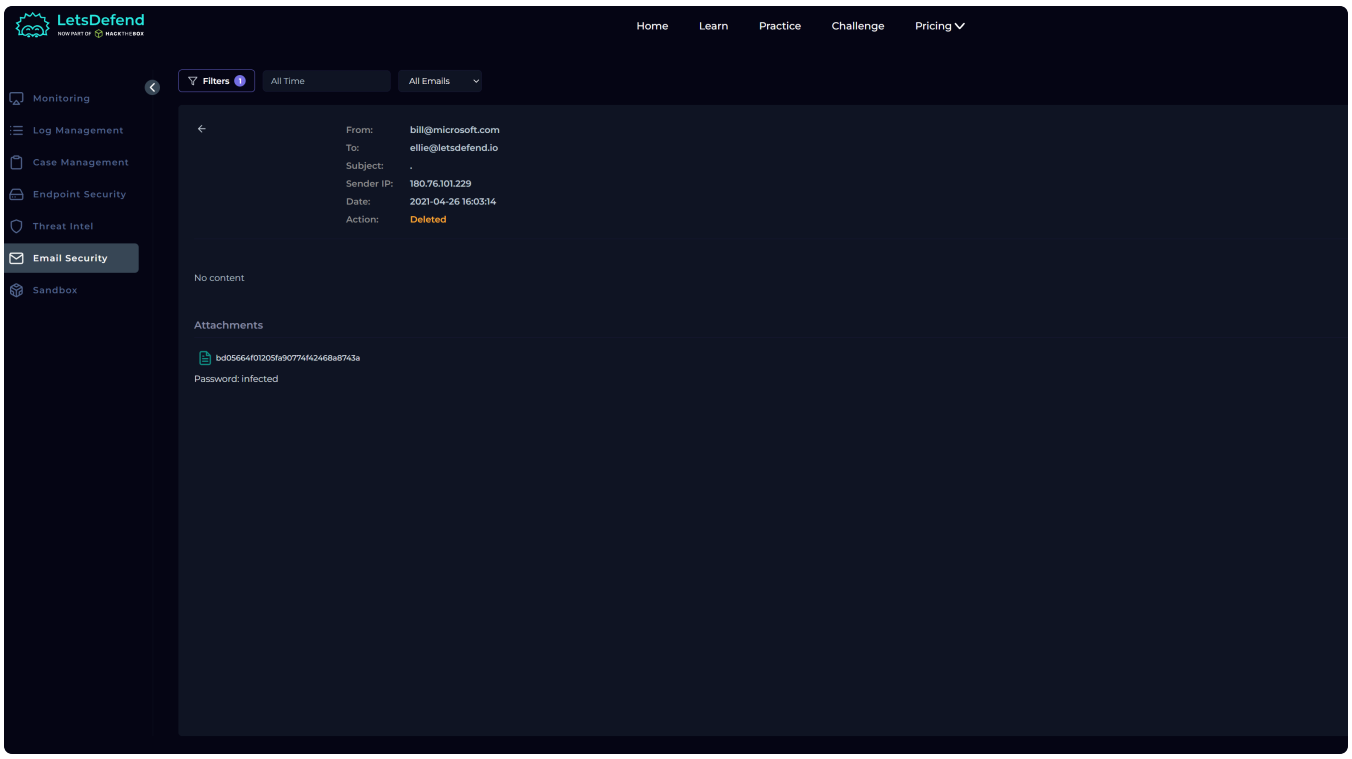

Field	Value
Alert	SOC143 – Password Stealer Detected
Event ID	90
Event time	2021-04-26 23:03:14 (+03:00)
Severity	Medium
Verdict	True Positive
Attachment opened	Not Opened

Summary

A spoofed email from `bill@microsoft.com` was delivered to `ellie@letsdefend.io` on 2021-04-26. It came from SMTP IP `180.76.101.229`, which is not Microsoft infrastructure. The subject was a single ".", the body was empty, and it carried a password-protected zip attachment (password: infected).

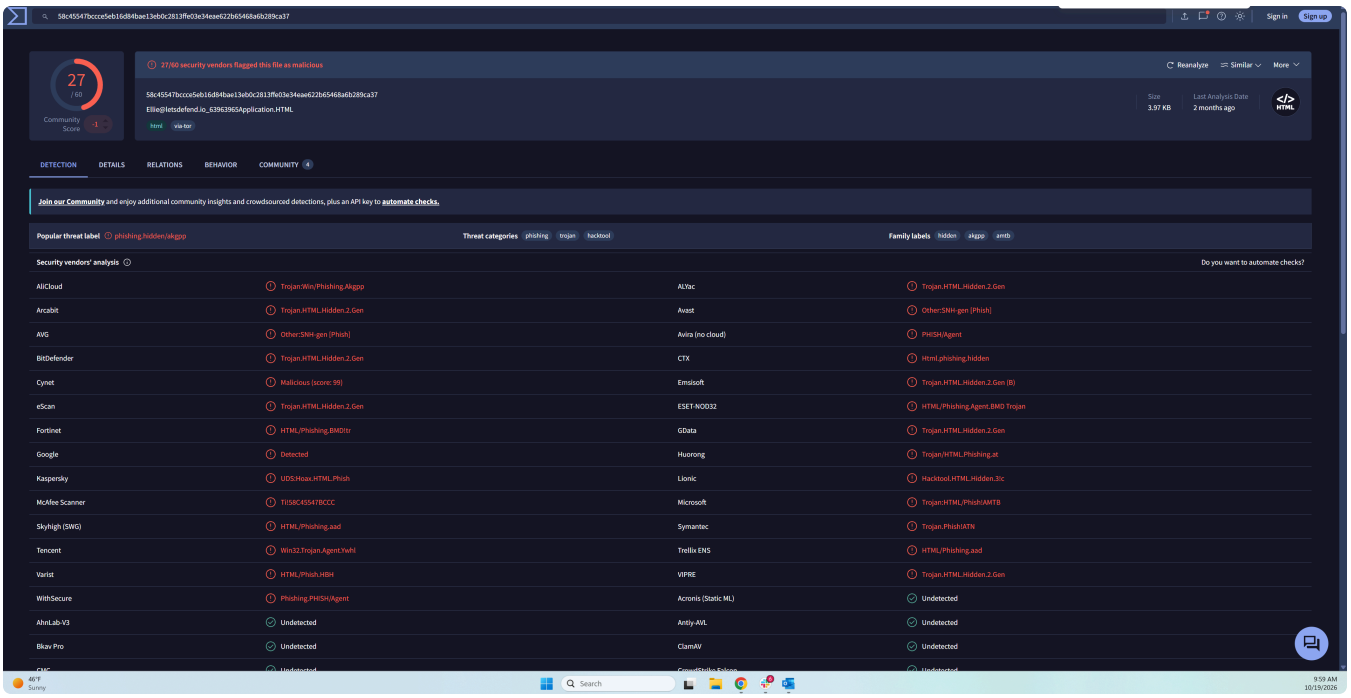

The alert shows the device action as Allowed. Email Security now shows the message as Deleted.

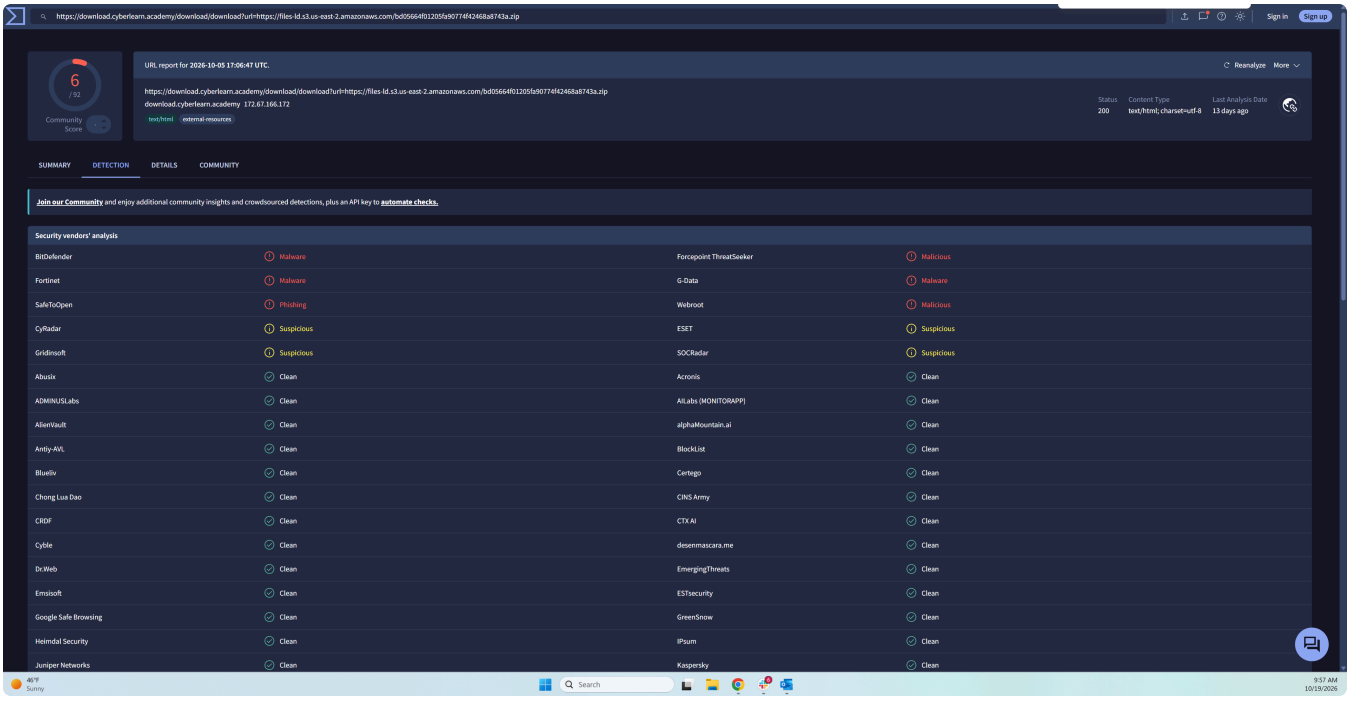

Analysis

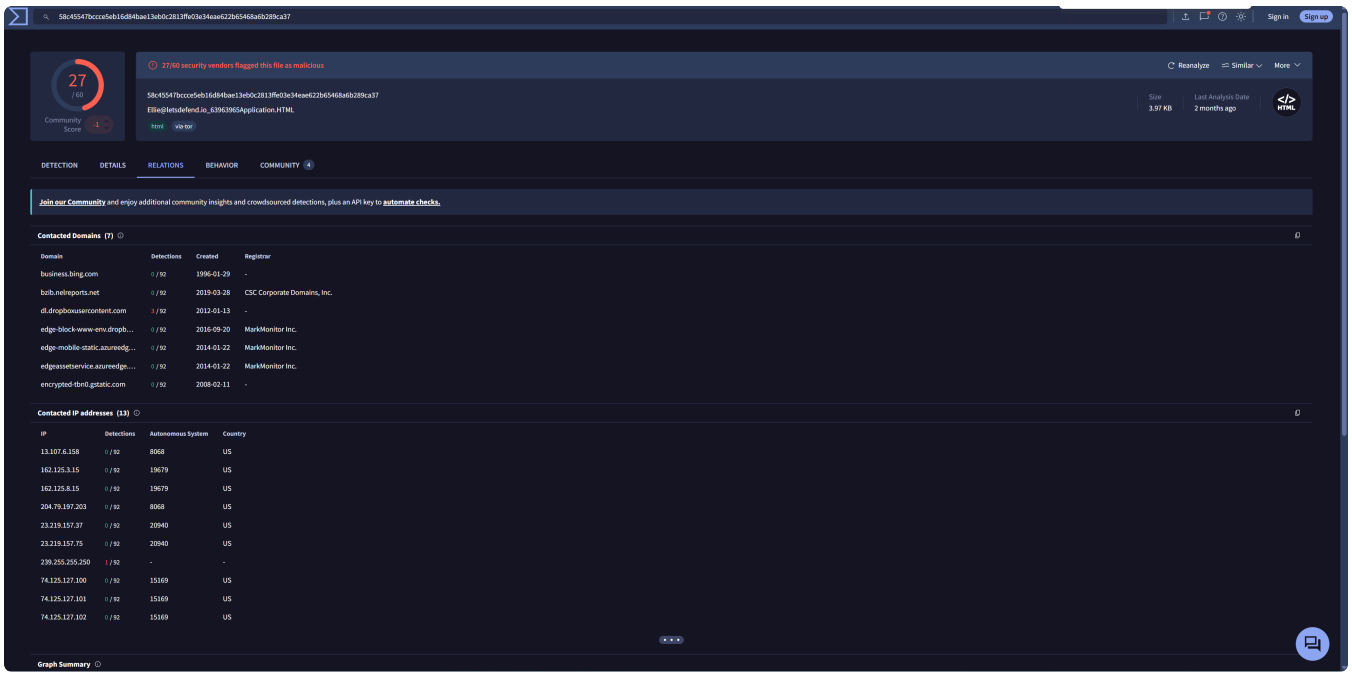

The attachment is a credential-phishing HTML page that VirusTotal flags as malicious (27/60 vendors). The zip (MD5 `bd05664f01205fa90774f42468a8743a`) contains `Ellie@letsdefend.io_63963965Application.HTML` (SHA-256 `58c45547bccce5eb16d84bae13eb0c2813ffe03e34eae622b65468a6b289ca37`), a fake Microsoft login page. Detections include phishing.hidden/akgpp and Trojan.HTML.Hidden.2.Gen.

The download link was also scanned. Its 6/92 result reflects the LetsDefend download wrapper page, not the attachment itself.

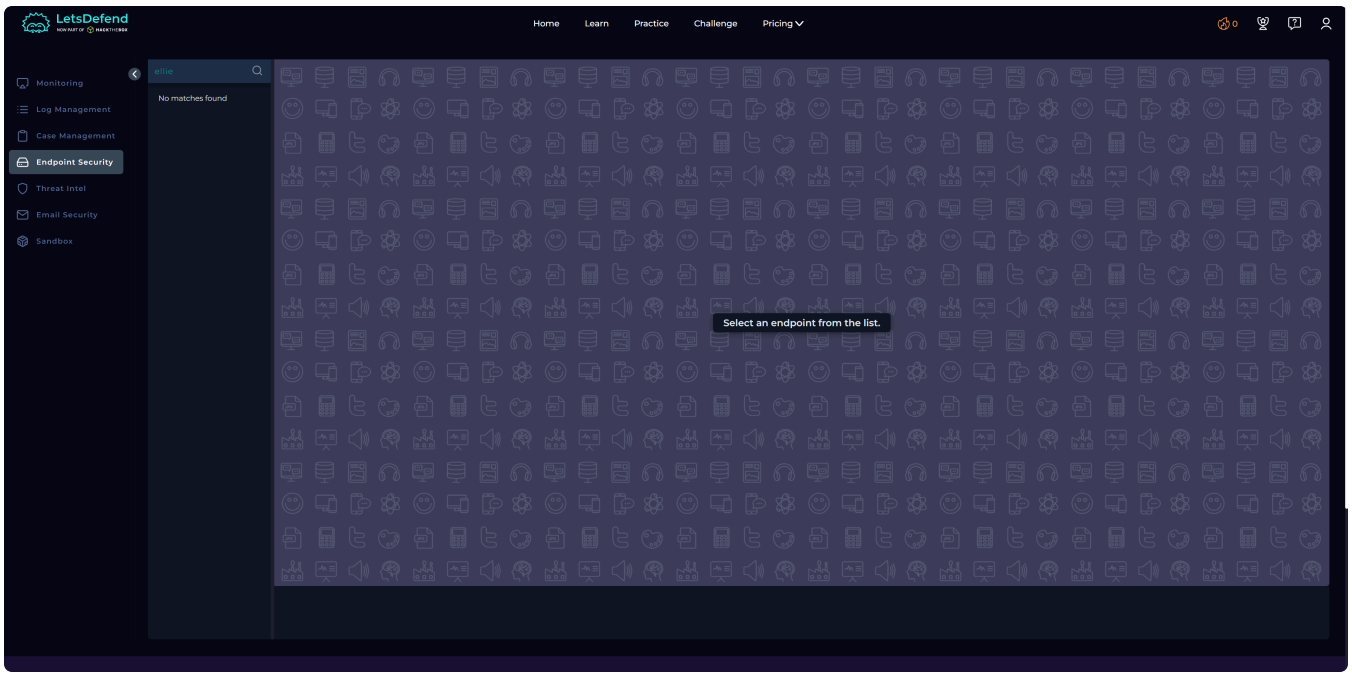

The file's contacted hosts were mostly browser and OS background traffic (Microsoft, Google, Akamai, SSDP). The only notable contact was Dropbox (`dl.dropboxusercontent.com`, 162.125.3.15, 162.125.8.15), likely used to load phishing content.

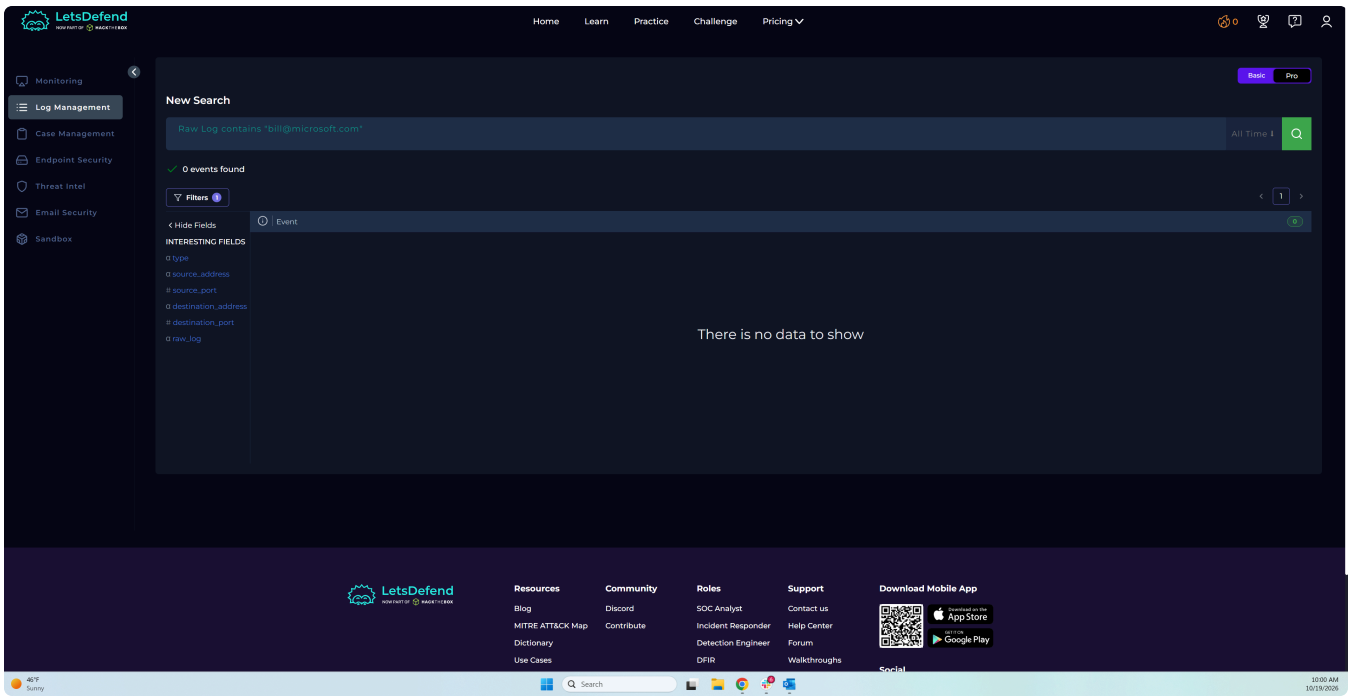

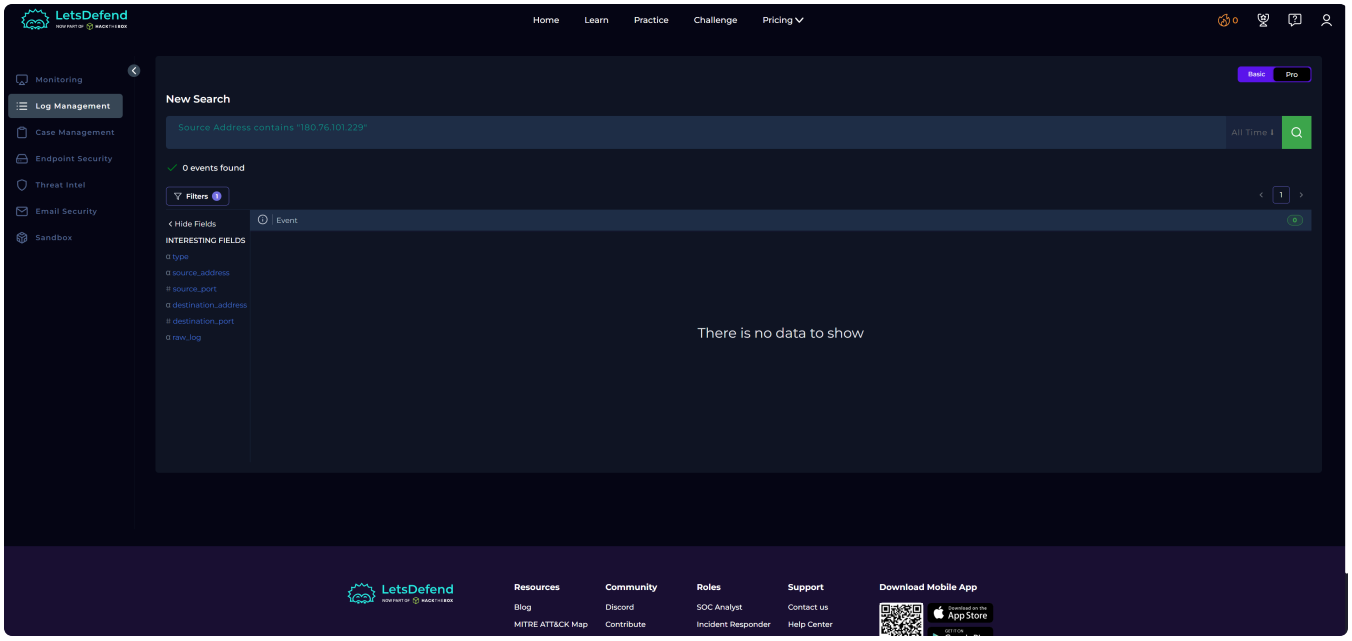

Scope

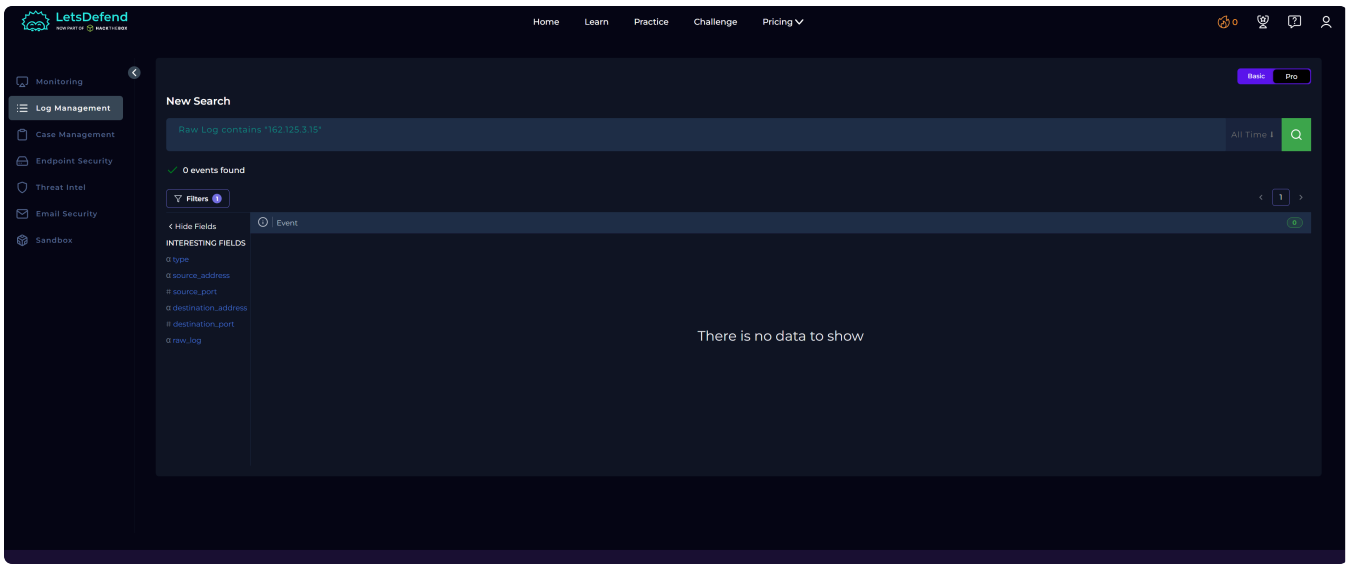

No evidence shows the attachment was opened or credentials were submitted. Endpoint Security has no host matching Ellie, so there is no device to inspect or contain.

Log Management searches across all time returned 0 events for the sender address, the sender IP (180.76.101.229) and the Dropbox IP the attachment contacted (162.125.3.15).

Actions and recommendations

- The email was deleted from the recipient's mailbox.
- Block sender IP `180.76.101.229` and the attachment hash at the email gateway.
- If Ellie's account becomes reachable, reset her credentials as a precaution and provide phishing-awareness training.
- Enforce SPF, DKIM and DMARC checks to stop spoofed Microsoft senders.

Artifacts
